(22)Date of filing : 16.10.1996 (72)Inventor : YAZAKI CHIKAYOSHI

## (54) COMMUNICATION TERMINAL EQUIPMENT

## (57)Abstract:

PROBLEM TO BE SOLVED: To allow an adapted data transmission means to automatically send data by registering a logic address of a transmission destination and a data transmission means in cross reference with each other, referencing a storage means in the case of designation of the logic address of the transmission destination and using the data transmission means corresponding to the designated logic address.

SOLUTION: A logic address of a transmission destination and a data transmission means are registered to a destination table T3 in cross reference with each other. G3 or G4 mode facsimile transmission or electronic mail transmission is set to each data transmission means and when an operation section

selects a logic address of the destination, the table T3 is referenced and a data transmission means corresponding to the selected logic address sends data to each destination. An abbreviation dial, a one-touch dial, and a multiple address communication name or the like are adopted for the logic address and a corresponding physical address is used and data are sent automatically to each physical address.
